

Water Meters

Examples of the different types of water meters used throughout Richmond Valley Council Local Government Area.

Council Water Meter Readers read ONLY the 'Black & White' numbers (Kilolitres).

Red numbers or dials are only used to record low range usage, and allows for checking for internal leaks.

How to read your water meter

- Take current reading of your water meter (black and white numbers only).
- Deduct these numbers from your previous reading (which is available on your water account) and this gives you your consumption in kilolitres (kL)
- Multiply your consumption by the current consumption rate/charge.
